## 

## Track Cable Cylinder

TC10 1" Bore

**Parts Sheet** 

1001-0232\_06

MODEL: TC10

ITEM	CONFIG. CODE	DESCRIPTION	QTY
<sup>2,3</sup> 1.	CATC10SK_	CABLE ASSEMBLY	2
	CATCM10SK_	CABLE ASSEMBLY, W/MAGNET OPTION	2
2.	0100-1306	THRUST RACE	4
3.	1001-1055	NEEDLE BEARING	
4.	1050-9005	PULLEY ASSEMBLY	2
5.	1001-9104	HEAD ASSEMBLY (INCLUDES GLAND INSERT), SINGLE PORT	2
6.	1001-1052	PULLEY SHAFT	2
7.	7. 1001-1056 EXTERNAL RETAINING RING		8
<sup>3</sup> 8.	1001-1276	1001-1276 CUSHION SPEAR, BUNA-N MATERIAL	
9.	1001-1190	01-1190 CLAMP PLATE	
10.	10. 1085-1075 SOCKET HEAD CAP SCREW		8
<sup>1</sup> 11.	111. RTBTC10SK_ ALUMINUM TUBE		1
	RTBTCM10SK_	ALUMINUM TUBE, W/MAGNET OPTION	1
	RTBTCS10SK_	STEEL TUBE	1

ITEM	CONFIG. CODE	DESCRIPTION	QTY
12.	1001-1040	PISTON	2
<sup>3</sup> 13.	1001-1020	PISTON U-CUP, BUNA-N MATERIAL	2
	1075-1025	PISTON U-CUP, VITON <sup>®</sup> MATERIAL	2
14.	1001-1194	PISTON SPACER	1
<sup>1</sup> 15.	NGSTC10SK_	GUIDE SHAFT	2
	NGSTCM10SK_	GUIDE SHAFT, W/MAGNET OPTION	2
16.	1001-1199	INTERNAL RETAINING RING	4
17.	1001-1197	BEARING BLOCK	1
18.	1001-1192	LINEAR BEARING	4
19.	1004-1188	JAM NUT	2
<sup>3</sup> 20.	1001-1013	PISTON WASHER	2
<sup>3</sup> 21.	1001-1021	O-RING CUSHION, BUNA-N MATERIAL	2
	0701-1043	O-RING CUSHION, VITON® MATERIAL	2
22.	1001-1044	EXTERNAL RETAINING RING	2

Steel Tube<sup>4</sup> –Magnet<sup>6</sup> Tube -<sup>1</sup> Replacement Tube (RTB) & Guide Shaft (NGS) ordering method: V M 10 SK EXAMPLE: RTB TC VM10SK21·25 <sup>2</sup> Repair Kit (RK) & Cable Assembly (CA) ordering method: EXAMPLE: RK TC VM10SK21·25 Repair Kit Т I Size Viton® Model Stroke Length Seals<sup>5</sup>

<sup>3</sup> Repair Kit (RK) includes: Piston U-Cups, O-Rings, Cable Assembly, Cushion Spear, Piston Washer

<sup>4</sup> Steel tubes (S) are incompatible with switches and magnets.

<sup>5</sup>  $\mathbf{V}$  refers to optional seals of Viton® material.

<sup>6</sup> M is for optional switch magnet, which is required for switches to function. Since the Magnet Option adds length to the piston and the tube length, it must be included when ordering.

#### INSTALLATION

When unpacking a track cable cylinder, BE EXTRA CAREFUL NOT TO SCRATCH OR MAR THE NYLON COVERING ON THE CABLE. The cylinder may be mounted by use of the bolt holes in head. When attaching the bearing block to a driven mechanism, be sure it is in perfect alignment and that the load does not exceed the specifications listed in the catalog.

#### **Pretensioning Instructions**

All track cable cylinders are shipped without being pretensioned. They must be tensioned after mounting to insure the maximum service life of the unit.

To pretension a track cylinder, remove one of the guide shafts to gain access to the terminals to adjust the cable tension. Block the load some distance from the end of travel to keep the cylinder from bottoming. Next, apply pressure 15 to 20 percent higher than the actual pressure required to move the load. When the load is stopped externally before the piston bottoms, the relief valve or regulator setting becomes the load pressure.

When pressurized, one cable will become tight while the other becomes slack. Manually take up the slack in the cable. Release the pressure and block the load from the other side. Repeat the manual adjustment on the other cable. Release pressure and remove the blocks. Reinstall the guide shaft which had been removed. Return the regulator to its original setting.

Additional manual adjustment should not be needed initially, after the cylinder has been pretensioned. It is suggested, however, that the cable tension be checked periodically, from a preventive maintenance standpoint.

#### **To Rebuild Cylinder**

- **1.** Remove the cylinder from machinery.
- **2.** Remove the guide shafts, then disconnect cables from bearing block and remove pulleys on both ends of cylinder.
- **3.** Remove one head from cylinder by removing the four cap screws.
- **4.** Pull piston towards the removed head and remove from the tube.
- **5.** Disconnect cables from piston. (See Cable Assembly/Disassembly Instructions at right.) Then remove the other cylinder head from tube and disengage cable from it.
- 6. Install new U-cups and O-rings on pistons.
- See Cable Assembly/Reassembly Instructions below. Always lubricate seals with oil when installing.
- **8.** Put one cable end through each cylinder head. Reattach one head to tube and connect the end of one cable to the piston. Then connect the other cable to the piston.

FIGURE 1. B 7 6 5 4 3 2 1

- **9.** Push piston back into tube by gently tucking in the U-cup. Mount head back on cylinder with the cap screws. Replace pulleys and connect cables to bearing block.
- 10. Pretension cables according to the pretensioning instructions.
- **11.** Operate cylinder back and forth by hand several times to be sure it is properly assembled before applying pressure.
- 12. Reinstall cylinder on machinery.

If the cylinder identification tag is missing, measure the overall length of cylinder, including the heads on both ends. Then refer to catalog dimensional drawing to determine stroke length

#### **SNAP IN/OUT CABLE ASSEMBLY INSTRUCTIONS**

Your Tolomatic Track Cable Cylinder has been designed to allow assembly and disassembly of cable assemblies from the cylinder heads without the use of tools.

#### Disassembly (Refer to Figure 1 & 2):

- 1. Holding onto cylinder Head (6), pull Piston Terminal (1) until Bearing Block Terminal (8) is against Washer (4).
- 2. Put a small amount of slack in Cable (7) as shown in Figure 2.
- 3. Impart a "snap" action to Piston Terminal (1).
- **4.** With the imparting "snap" action, Washer (2) will release allowing the removal of the complete cable assembly.

# Reassembly (Refer to Figure 1 & 3): 1. Holding onto cylinder Head (6), string Bearing

Block Terminal (8) through Gland (5) until Washer (2), U-cup (3) and Washer (4) are held flush against one another by Piston Terminal (1).

**2.**Put a small amount of slack in Cable (7) as shown in Figure 3.

**3.** Impart a "snap" action to Bearing Block Terminal (8).

**4.** With the imparting "snap" action, Washer (2) will snap into Gland (5).

**5.** Move the Cable (7) in the opposite direction as shown in Figure 2, to verify if Washer (2) is seated in Gland (5). If not, repeat steps 1-4.

#### MAINTENANCE

Cylinder should be kept as clean as possible around the pulleys, glands, guide shafts, etc. Always use air that is adequately lubricated with SAE 10 or 20 nondetergent oil. Pulleys have permanently lubricated bearings and require no maintenance.

Your Tolomatic Track Cable Cylinder will give you many cycles of trouble free service. However, should a leak occur, a rebuilding kit can be obtained which enables you to replace all seals in the cylinder to return it to its proper operating condition.

5M

### **REED SWITCHES**

NOTE: Form A Reed Switches should not be used in TTL logic circuits. A voltage drop caused by the L.E.D. indicator will result.For applications where TTL circuits are used, please contact Tolomatic.

WARNING: An ohmmeter is recommended for testing Reed Switches. NEVER use an incandescent light bulb as a high current rush may damage the switch. Reed and TRIAC switches are only recommended for signalling position, not directly powering soleniods. For shifting a solenoid, a relay or resistor is recommended between it and the switch. Switch ratings must not be exceeded at any time

	CONFIG. CODE ORDERING
